

Control your home from the phone!

touch me is more than just a wireless thermostat..

..it is a unique heating & cooling control system for your home via smart App

- Create your perfect environment: set the desired temperature on your phone or tablet, the *touch me* thermostat is fully remotely configurable via the smart App.
- Control your heating and cooling system: schedule it weekly and adjust the settings anytime and anywhere.
- Disregard your old thermostat: settings are carried out with the user-friendly smart App.
- Place the thermostat anywhere: its' elegant design with the white glossy and smooth surface allows you to position it in the in the perfect location at home without any tampering to your existing wiring system.

Home environment control at your fingertips!

Welcome home

Now it is easy to have a comfortable home environment. Whether you are at home or not you can always control the comfort via the smart App and change if necessary the setting points in order to keep efficiency of your heating/cooling system.

How it works

touch me allows you to control the comfort of the home environment. The system is composed of a wireless indoor thermostat with a programmable weekly heating schedule and a remote switch for pump/heating-cooling management. The switch controls the boiler; a relay on the board is responsible for closing and opening the circuit (turning your boiler on and off).

Possible functions are:

- temperature set points settings
- modes settings: Heating/Cooling/OFF
- modes settings: Summer or Winter

The remote configuration via mobile devices (smartphone or tablet) or PC is possible when the thermostat is used combined with a Gateway.

The technology

Each devices use the ZigBee technology, the wireless communication protocol that offers the ability to build reliable, cost effective, low-power control products, based on an open global standard.
